## Session 2 Recognizing and accommodating uncertainties

- Does large uncertainty in PRA results mean they are not applicable for decision making? -

## Discussion Points

- Is quantitative assessment of uncertainties in PRA of internal and external events including natural external events considered impossible?
- The regulatory authority and operators continue to make various decisions while having qualitatively uncertain and incomplete information. What is the best approach to decision making when there is a lot of uncertainty?
- Is it considered difficult in the first place to use risk assessment results with large uncertainties in decision making? What is the cause of this?
